

SYSTEM AND METHOD FOR DISPLAYING DYNAMIC PAGE CONTENT
IN A PAGE-CACHING BROWSER

ABSTRACT OF THE DISCLOSURE

- Embodiments of the present invention provide a system and method for
- 5 displaying dynamic page content in a page-caching browser. The system and method prevent the loading of unintended page content from a local cache into a browser by ensuring the uniqueness of the content request. Such embodiments include (i) specifying an address to stored content; (ii) appending a unique identifier to the address; (iii) requesting the content with the address and appended identifier; and (iv)
- 10 transmitting the content request to the server regardless of whether there is cached content associated with the address. By appending a unique identifier to the requested address, each content request is unique, thus, preventing the browser from locating and loading corresponding content from the cache.
